

## MALCO<sup>®</sup> IRON BLASTER FALLOUT REMOVER (2662)

### DESCRIPTION

Malco Iron Blaster is designed to remove stubborn contaminants from vehicle paint. This neutral pH formula breaks down rail dust, industrial fallout and stuck on iron deposits. Iron Blaster was developed to dissolve even the toughest contaminants while restoring paint to a bright finish. Iron Blaster is safe to use on all OEM paints, glass and removes brake dust from coated wheels. For stubborn wheel stains follow up with a wheel cleaner like Fast Shot.

### DIRECTIONS

Before final wash of the vehicle use Malco Iron Blaster to remove fallout contaminants. Rinse loose dirt and grime and ensure surface is cool and out of direct sunlight. Shake bottle well, spray onto contaminated area and let dwell for 3-4 minutes, allowing the formula to penetrate and loosen the particles. Do not allow product to dry on surface. The formula will turn from clear to purple as it begins working. Rinse thoroughly, using high pressure water if possible. If some contaminants remain after rinsing, reapply more liberally and agitate with a towel or sponge if necessary. Always do a final rinse before beginning the traditional washing step.

### FEATURES AND BENEFITS

Quickly breaks down iron and fallout contaminants	Strongest formula in the industry makes cleanup easy
Safe to use on all OEM finishes and coatings	Neutral pH formulation has less offensive scent
VOC compliant	Body shop safe

### PACKAGE SIZES

- 22 oz. (Part number: 266222)

### FAQ's

What happens if it dries on my vehicle?	You may need slight agitation or buffing off, but no permanent damage.
Will it clean my wheels completely?	It will clean brake dust and iron, but not the stuck-on road grime.
What happens if I get it on my skin?	It is pH neutral so just rinse it off with soap and water.
